### Tools Required

## STEP BY STEP INSTALLATION

**Step 1)** Remove the six screws from the front of the Audio Box faceplate and the Audio Box from the armored case.

**Step 2)** On the left side of the armored case, measure and mark 2 3/4" into the middle of the side of the case.

**Step 3)** Measure and mark 1 1/2" down from the bottom lip of the armored case.

**Step 4)** Using the marks from steps 2 & 3, drill into the middle of the case using the 13/16" spade bit.

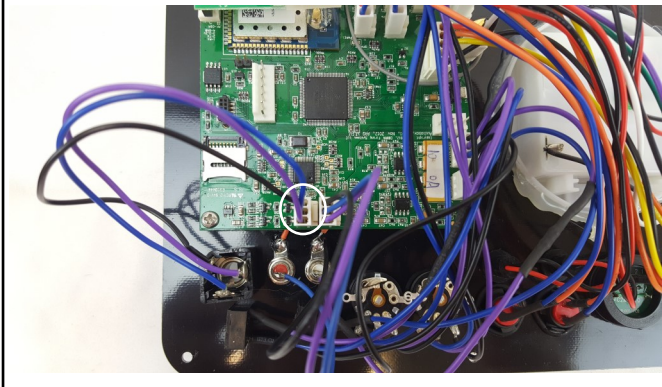

**Step 5)** Insert the XLR board through the hole in the side of the armored case.

**Step 6)** Use the drill and phillip bit to insert the included screws into the top left and bottom right of the XLR connector.

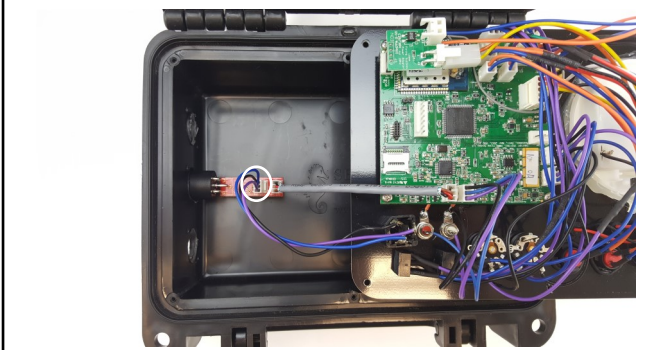

**Step 7)** Disconnect J5 cable (1/4" Jack Cable) from the Audio Box.

**Step 8)** Connect the XLR cable into the J5 connector on the Audio Box and the CN2 connector on the XLR board.

**Step 9)** Connect the cable that was plugged into J5 on the Audio Box, into the CN3 connector on the XLR board.

**Step 10)** Re-install the six screws into the front of the Audio Box faceplate. Do not over tighten.

Congratulations, you are now finished with the XLR installation!
